EVIDENCE-BASED POLICY MAKING FOR PUBLIC HEALTH INTERVENTIONS: ASSESSING THE FEASIBILITY OF CONDUCTING TRIALS WITH HARD CLINICAL OUTCOME

Policy makers often question whether additional research, especially randomizedcontrolled trials (RCTs), are needed to prove that prevention policies are effective. Despite the prominent role of RCTs in health care, it is not always feasible to conduct these kinds of studies for public health interventions with hard outcomes due to logistical and ethical considerations. Currently, rUNnN Vo VaosS JVNartsVLAaJN for policymakers charged with establishing evidence-based policy to determine whether an RCT with hard outcomes is needed prior to legislation or regulation.

This paper summarizes a case study and analysis looking

RECOMMENDATIONS FOR REGIONAL STROKE DESTINATION PLA IN RURAL, SUBURBAN AND URBAN COMMUNITIES FROM THE PREHOSPITAL STROKE SYSTEM OF CARE CONSENSUS CONFERE

(Continued)

This statement will help to maximize patient access to evidence-based acute stroke therapies by providing state and regional policymakers, EMS agencies, and stroke advisory committees with recommendations for stroke systems of care tailored to population density, geography, health care resources and other considerations.
